A;Title: Comparative study of glycopeptides derived from selected vertebrate collagens.
A;Reference number: A92069; MJID:71001508; PMID:4319110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A, Molecule type: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the entire helical and telopeptide regions of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  to 5-hydroxylysine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Experimental source: skin

```
A. Accession: Wellse A. Molecule type: protein a Molecule type: protein a Molecule type: protein the composition of peptides comprising residues 1-9 and 1-19 confirms the sequench A. Mote: the composition of peptides at the third position of the tripeptide repeating unit (and subsequently O-glycosylated.

A. Mote: the complete chain contains 1052 residues.

C. Comment: The complete chain contains 1052 residues.

C. Superfamily: collagen alpha 1(1) chain, fibrillar collagen carboxyl terminal homology;

C. Modified site: blocked amino end (Glx) (probably pyrrolidone carboxyl caid) #status F; 103, 424, 547/Binding site: allysine (Lys) #status experimental

F; 103, 424, 547/Modified site: brydroxylysine (Lys) (covalent) #status experimental

F; 124, 547/Modified site: 5-hydroxylysine (Lys) (partial) #status experimental

                  "Two menus of mouse pro alpha 1(1) collagen gene differ in the size of the 3'-untranslated region.";
Nucleic Acids Res. 16:773-773(1988).
-!- FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).
-!- SUBGUIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                             PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. SIMILARITY: Contains 1 VWFC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         R InterPro; IPRO08164; Cig_helix.

"A point mutation in a type I procollagen gene converts glycine 748 of the alpha 1 chain to cysteine and destabilizes the triple helix in a lethal variant of osteogenesis imperfecta."; J. Biol. Chem. 262:14737-14744 (1987).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=90062068; PubMed=2511192;
Pack M., Constantinou C.D., Kalia K., Nielsen K.B., Prockop D.J.;
Wisubstitution of serine for alpha 1(I)-glycine 844 in a severe
variant of osteogenesis imperfecta minimally destabilizes the triple
helix of type I procollagen. The effects of glycine substitutions on
thermal stability are either position of amino acid specific.";

Blochim. Blophys. Acta 1089:241-243(1991).
-!- FUNCTION: Collagen type III occurs in most soft connective tissues
along with type I collagen.
-!- SUBUNIT: Trimers of identical alpha I(III) chains. The chains are
linked to each other by interchain disulfide bonds. Trimers are
also cross-linked via hydroxylysines.
-!- PTM: Proline residues at the third position of the tripeptide
repeating unit (G-X-Y) are hydroxylated in some or all of the

Rossi P., de Crombrugghe B.; Specific transcriptional enhancer in the first incron of a call-specific transcriptional enhancer in the first incron of the mouse alpha 2 (type I) collagen gene.";

Proc. Natl. Acad. Sci. U.S.A. 44:5590-5594(1987).

- I FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).

- I SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

- I TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY).

1. Med. Genet. 35:846-848(1998).

1. 1. EUNCTION: Type V collagen is a member of group I collagen

(fibrillar forming collagen). It is a minor connective tissue

(component of nearly ubiquitous distribution. Type V collagen binds

to DNA, heparan sulfate, thrombospondin, heparin, and insulin.

1. SUBDNIT: Trimers of two alpha 1(V) and one alpha 2(V) chains in

most tissues and trimers of one alpha 1(V), one alpha 2(V), and

one alpha 3(V) chains in placenta.

1. PTM: Prollines at the third position of the tripeptide repeating

one alpha 3(V) chains in placenta.

1. PTM: Prollines at the third position of the tripeptide repeating

unit (G-X-Y) are hydroxylated in some or all of the chains.

1. DISEASE: Defects in COLSA2 are a cause of Bhlers-Danlos syndrome

type I (EDS-I) [MIN: 130000]; also known as Ehlers-Danlos syndrome

gravis. EDS-I is an autosomal dominant.

1. DISEASE: Defects in COLSA2 are a cause of Ehlers-Danlos syndrome

type II (EDS-II) [MIN: 130010]; also known as Ehlers-Danlos

syndrome mitis. Inheritance is autosomal dominant.

2. SIMILARITY: Contains I VMPC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Burrows N.P.; "A single base mutation in COLSA2 causes Ehlers-Danlos syndrome type II.";

Submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Type I collagen is a member of group I collagen
(fibrillar forming collagen).
-!- SUBUNITY: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
